

5.0 SECURITY KEYS

These are the Security Key assignments for Patient Chart. Each user must have the security key assigned for each function that the user needs enabled (see descriptive name for key function).

For example, to have the Medication tab enabled, the user must be assigned the BPCTRX key. Within the Medication tab, other security keys control the Medication tab functions. To change the date range (within the Medication tab) the user must also have the BPCRXPMD key assigned. To refresh the view, the BPCRXPMPR key must be assigned. To print, the user must have the BPCRXPMP key. To view the Pharmacy Medication Profile, the user must have the BPCRXPMP key. Within the Pharmacy Med Profile, the print function requires the BPCRXPMP key, the date change function requires the BPCRXPMPD key, and the refresh function requires the BPCRXPMPR key.

Note that all TAB assignments begin with BPCT. Each module is then controlled by BPCxx where xx is the module abbreviation, such as RX for Meds or HS for Health Summary. All primary menu options begin with BPCMN.

The Security Keys are assigned based on the role of the user, just as in the traditional RPMS applications. Depending on the access needs of your site's users, your security key assignments may be very similar or very dissimilar between staff levels. The chart below is a guide for assigning security keys for the Patient Chart program. The chart below has been left blank so that you can keep a record of your site's access levels and the associated security keys for future reference. If you need assistance in determining what keys to assign to your site staff, please contact the ITSC Support Center at (888) 830-7280 or rpmshelp@mail.ihs.gov.

Tip: Because of the number of keys that need to be assigned, we recommend that you allocate all keys to all users and then manually deallocate the keys that are inappropriate for each user.

Security Key	Descriptive Name	Provider	Nurse	Clerk	Lab	Pharmacy	Social
